

V7 G1 support mechanism — same frozen representative sample v6p1if1_0533 (seed 1)

★ q block ◆ k block ▲ interface ■ top + bottom ● volume

Full uses the frozen physics-layout-aware sparse support: q/k-block, interface, surface, and control-volume strata. Generic support keeps the geometry/interface/surface/CV coverage but removes q/k layout quotas. CV-only uses only interior control-volume-weighted points.
